

DUNCAN
AVIATION

Duncan Aviation recruits students from Spartan College of Aeronautics for several reasons.

The curriculum and hands on experience that students receive going through the program is beneficial in producing a knowledgeable employee that should require a shorter initiation period before becoming productive on the floor.

The school has been receptive to input from advisors tweaking and improving the program as industry changes occur. To that note, the school has solicited some of the most diverse and knowledgeable advisors to keep the program in tune with industry needs.

Spartan has a unique way of providing interaction between industry representatives and the student body, whether it be the advisor group or career fair events. This has to be beneficial to students looking for opportunities and ensuring they find the right job for them after completing the course.

With training being tied to occupation standards such as NCATT and FCC and the school working with organizations like AEA, students are tested and exposed to expectations they'll have their entire career in aviation. Employers recognize these and have a higher level of confidence in the type of employee they may be hiring from Spartan.

Duncan Aviation always looks forward to attending the career fair in hopes of hiring new employees into a great family oriented team environment where they have the opportunity to work on several different types of corporate jet airframes and avionics systems utilizing leading edge equipment and facilities.

A handwritten signature in dark ink, appearing to read 'Kevin Miesbach', written in a cursive style.
